THE PATENT OFFICE

PATENTS AND DESIGNS

Kolkata, the 13th November 2004

ADDRESSES AND JURISDICTION OF THE OFFICES OF THE PATENTS OFFICE

The Patent Office has its Head Office at Kolkata and Branch Offices at Mumbai, Delhi and Chennai having Territorial Jurisdiction on a Zonal basis as shown below:—

1. Patent Office Branch,
Todi Estates, IIIrd Floor,
Sun Mill Compound,
Lower Parel (West),
Mumbai–400 013.

The States of Gujarat, Maharashtra, Madhya Pradesh and Goa and the Union Territories of Daman and Diu & Dadra and Nagar Haveli.

Telegraphic Address "PATOFFICE"
Phone Nos. (022) 2492 4058, 2496 1370, 2492 3684, 2490 3852
Fax Nos. (022) 2495 0622, 2490 3852
E-mail: patmum@vsnl.net

2. Patent Office Branch,
W-5, West Patel Nagar,
New Delhi–110 008.

The States of Haryana, Himachal Pradesh, Jammu and Kashmir, Punjab, Rajasthan, Uttar Pradesh and Delhi and the Union Territory of Chandigarh.

Telegraphic Address "PATENTOFIC"
Phone Nos. (011) 2587 1255, 2587 1256, 2587 1257, 2587 1258.
Fax No. (011) 2587 1256.
E-mail: delhipatent@vsnl.net

3. Patent Office Branch,
Guna Complex, 6th Floor, Annex-II,
443, Annasalai, Teynampet,
Chennai-600 018.

The States of Andhra Pradesh, Karnataka, Kerala, Tamil Nadu and Pondicherry and the Union Territories of Laccadive, Minicoy and Aminidivi Islands.

Telegraphic Address "PATENTOFFIC"
Phone Nos. (044) 2431 4324/4325/4326.
Fax Nos. (044) 2431 4750/4751.
E-mail. patentchennai @ vsnl. net

4. Patent Office (Head Office),
Nizam Palace, 2nd M.S.O. Building,
5th, 6th & 7th Floor,
234/4, Acharya Jagadish Bose Road,
Kolkata–700 020.

Rest of India

Telegraphic Address "PATENTS"
Phone Nos. (033) 2247 4401/4402/4403.
Fax Nos. (033) 2247 3851, 2240 1353.
E-mail. patentin @ vsnl. com

पेटेंट कार्यालय

एकस्व तथा अभिकल्प

कोलकाता, दिनांक 13 नवम्बर 2004

पेटेंट कार्यालय के कार्यालयों के पते एवं क्षेत्राधिकार

पेटेंट कार्यालय का प्रधान कार्यालय कोलकाता में अवस्थित है तथा मुम्बई, दिल्ली एवं चेन्नई में इसके शाखा कार्यालय हैं, जिनके प्रादेशिक क्षेत्राधिकार जोन के आधार पर निम्न रूप में प्रदर्शित हैं:--

1. पेटेंट कार्यालय शाखा,
टोडी इस्टेट, तीसरा तल,
सन मिल कम्पाउंड,
लोअर परेल (वेस्ट),
मुम्बई - 400 013 ।

गुजरात, महाराष्ट्र तथा मध्य प्रदेश
तथा गोआ राज्य क्षेत्र एवं
संघ शासित क्षेत्र, दमन तथा दीव एवं
दादर और नगर हवेली।

तार पता : "पेटोफिस"
फोन : (022) 2492 4058, 2496 1370, 2490 3684, 2490 3852
फैक्स : (022) 2495 0622, 2490 3852
ई. मेल : patmum@vsnl.net

2. पेटेंट कार्यालय शाखा,
डब्ल्यू-5, वेस्ट पटेल नगर,
नई दिल्ली - 110 008 ।

हरियाणा, हिमाचल प्रदेश, जम्मू
तथा कश्मीर, पंजाब, राजस्थान,
उत्तर प्रदेश तथा दिल्ली राज्य
क्षेत्रों एवं संघ शासित क्षेत्र चंडीगढ़।

तार पता : "पेटेंटोफिक"
फोन : (011) 2587 1255, 2587 1256, 2587 1257,
2587 1258.
फैक्स : (011) 2587 1256.
ई. मेल : delpatent@vsnl.net

3. पेटेंट कार्यालय शाखा,
गुप्ता कम्प्लेक्स, छठा तल, एनेक्स-II,
443, अन्नासलाई, तेनामपेट,
चेन्नई - 600 018 ।

आन्ध्र प्रदेश, कर्नाटक, केरल, तमिलनाडु
तथा पाण्डिचेरी राज्य क्षेत्र एवं संघ
शासित क्षेत्र लक्षद्वीप, मिनिकाय तथा एमिनिदिवि द्वीप।
तार पता - "पेटेंटोफिक"
फोन : (044) 2431 4324/4325/4326.
फैक्स : (044) 2431 4750/4751.
ई. मेल : patentchennai@vsnl.net

4. पेटेंट कार्यालय (प्रधान कार्यालय),
निजाम पैलेस, द्वितीय बहुतलीय कार्यालय
भवन, 5वां, 6ठा व 7वां तल,
234/4, आचार्य जगदीश बोस मार्ग,
कोलकाता - 700 020 ।

भारत का अवशेष क्षेत्र।

तार पता - "पेटेंट्स"
फोन : (033) 2247 4401/4402/4403.
फैक्स : (033) 2247 3851, 2240 1353.
ई. मेल : patentin@vsnl.com
patindia@giascl01.vsnl.net.in
वेब साइट : http//www. ipindia.nic.in

पेटेंट अधिनियम, 1970 तथा पेटेंट (संशोधन) अधिनियम, 2002 अथवा पेटेंट नियम, 2003 द्वारा अपेक्षित सभी आवेदन, सूचनाएं, विवरण या अन्य दस्तावेज या कोई फीस पेटेंट कार्यालय के केवल समुचित कार्यालय में ही ग्रहण किए जाएंगे।

शुल्क : शुल्कों की अदायगी या तो नकद की जाएगी अथवा जहां उपयुक्त कार्यालय अवस्थित है, उस स्थान के अनुसूचित बैंक से नियंत्रक, पेटेंट को भुगतान योग्य बैंक ड्राफ्ट अथवा चैक द्वारा की जा सकती है।

194532 (947/MAS/2001) ANTEDATED TO 22.02.2001.

194560 (946/MAS/2001) ANTEDATED TO 22.02.2001.

## अभिगृहित पूर्ण विनिर्देश

एतद्द्वारा सूचना दी जाती है कि आवेदनों में किसी पर पेटेंट अनुदान का विरोध करने वाले इच्छुक व्यक्ति राजपत्र के इस निर्गमन की तिथि से चार महीने के भीतर या उक्त चार महीने की समाप्ति के पूर्व, प्ररूप 4 में यदि आवेदित किया हुआ हो, तो परवर्ती एक महीने के भीतर, किसी समय, नियंत्रक, पेटेंट को ऐसे विरोध की सूचना प्ररूप 7 में उपयुक्त कार्यालय में दे सकते हैं। विरोध का लिखित कथन साक्ष्य के साथ, यदि कोई हो, दो प्रतियों में उक्त सूचना के साथ या अगले दो महीने की अवधि के भीतर दाखिल किया जाए। इस संदर्भ में, यथा संशोधित पेटेंट अधिनियम, 1970 की धारा 25 एवं पेटेंट नियम, 2003 के नियम 55 से 57 का अवलोकन किया जा सकता है।

उपयुक्त कार्यालय द्वारा विनिर्देश एवं चित्र आरेख, यदि हो, के छायाप्रति की आपूर्ति छायाप्रति शुल्क के रूप में प्रति पृष्ठ रु. 4/- की अदायगी पर की जा सकती है।

## COMPLETE SPECIFICATION ACCEPTED

Notice is hereby given that any person interested in opposing the grant of a Patent on any of the Applications, may, at any time within four months from the date of this issue of Gazette or within further period of one month if applied for in Form 4 before the expiry of the said period of four months, give notice to the Controller of Patents at the Appropriate Office on Form 7 of such opposition. The Written Statement of Opposition accompanied by evidence, if any, should be filed in duplicate along with the said notice or within further period of two months. Section 25 of The Patents Act, 1970 as amended and Rules 55 to 57 of The Patents Rules, 2003 may be referred to in this regard.

Photo copies of the specification and drawings, if any, can be supplied by the Appropriate Office on payment of photocopying charges @ Rs. 4/- per page.

## 21CLAIMS.

A circuit for controlling power associated with a power amplifier in a portable radiotelephone having a first communication mode and a second communication mode, the circuit comprising:

means for supplying power to said circuit;

a power supply controller, responsive to said power supplying means and operatively coupled to said power amplifier, for adjusting said power supplied from said power supplying means and delivering said adjusted power to said power amplifier; and

a control unit, operatively coupled to said power supply controller, outputting one of a plurality of control signals for controlling voltage levels provided by said power supply controller, each of said power control signals corresponding to one of said first communication mode, said second communication mode, a strong electric field, and a weak electric field.

**17CLAIMS.**

1. A bi-directional shift register, comprising:

a source (101, Fig. 1) of a plurality of phase shifted clock signals (C1, C2, C3) having a first phase relationship therebetween (Figures 3a-3g), when a first direction of shifting is selected, and having a second phase relationship therebetween (Figures 4a-4b), when an opposite direction of shifting is selected;

a plurality of cascaded stages (n-1,.n+2; Fig. 1) coupled to said source of said clock signals, a given stage (n-Figure 2) of said cascaded stages, comprising

a first output transistor for generating an output pulse (OUTn) at an output (118) of said given stage, when, during a corresponding clock signal (C1) associated with said given stage, said transistor is enabled (gate of 16 is HIGH), such that, when said first output transistor is disabled (Gate OF 16 is low), during said associated clock signal, said first output transistor prevents the generation of said output pulse of said given stage; characterized by:

a first input section (18, 18a) responsive to a corresponding output pulse (OUTn-1, OUTn+1) generated in each one of second (n-1) and third (n+1) stages for enabling said first output transistor when each of said second stage and third stage output pulses occurs, such that when said first phase relationship is selected, said given stage output pulse occurs following said second stage output pulse, and, when said second phase relationship is selected, said given stage output pulse occurs following said third stage output pulse; and

a second input section (25, 25a) responsive to a corresponding output pulse (OUTn+2, OUTn-2) generated in a corresponding stage (n+2, n-2) for disabling said first output transistor after said given stage output pulse has occurred.

## 5CLAIMS.

1. Process for the production of grain-oriented electrical steel sheets, comprising the following steps in sequence :-

(a) casting silicon steel of composition, such as herein described,into slabs in a continuous casting method , followed by

(b) producing a strip by hot-rolling the slabs and coiling the strips,

(c) cold-rolling the hot-rolled strips,

(d) annealing the strips continuously for primary recrystallisation of the same,

(e) nitriding the strips, and

(f) annealing the strips for secondary recrystallisation, under conditions, such as herein described,

characterised in that

(i) the managanese content of the strip is maintained in the range of 400-1500 ppm;

(ii) the weight ratio between manganese content and sulphur content of the strip is maintained in the range of 2 - 30, the sulphur content of the strip being not allowed to be higher than 300 ppm;

(iii) the slabs are heated at the temperature range of 1100-1300°C; and

(iv) the slabs are hot-rolled into the strips at initial temperature between 1000°C and 1150°C and at final temperature between 900°C and 1000°C, and the strips are coiled at temperature between 550°C and 720°C to produce thereby thin precipitates in the hot-rolled strips with an effective inhibition (Iz) according to the empirical formula :

$$Iz = 1.91 Fv/r$$

where Fv is the volume fraction of the thin precipitates and r is the mean radius of the said precipitates.

10CLAIMS.

Method for configuration of a radio interface between a mobile station (MS) and a base station (BS) of a time-division multiplex mobile radio system for packet data transmission, wherein

- the transmission from a mobile station (MS) to the base station (BS) is called the uplink direction, and from the base station (BS) to a mobile station (MS) is called the downlink direction,
- a channel (GPRS-K) is formed by at least one time slot (ts, T, A) per time-division multiplex frame (R),
- the packet data transmission from a plurality of mobile stations (MS) takes place via the common channel (GPRS-K),
- a time slot (ts, A, I) for signalling is provided at cyclic intervals in the channel (GPRS-K),

in which

- the mobile stations (MS) are additionally identified by abbreviated identifiers (id) for packet data transmission,
- the base station (BS) allocates to the mobile station (MS) one or more time slots (ts, A) for signalling for the uplink direction in accordance with a sequence which can be predetermined,
- the allocation being carried out by means of indicator messages which contain abbreviated identifiers (id) and time slot designations, and
- allocation being independent of a sequence of packet data transmission from or to the mobile station (MS).

Application no 607/CAL/1998 FILED ON 07.04.1998
(CONVENTION NO. 08/838,834 FILED ON 11.4.1997 IN USA)

*APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.*

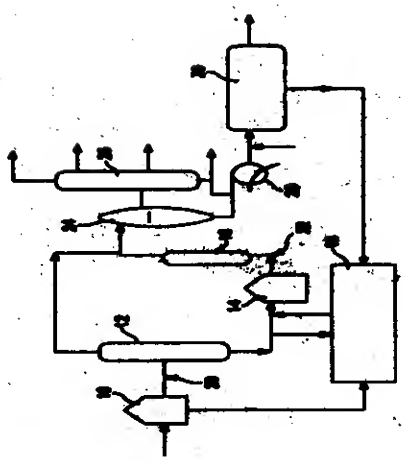
## 36CLAIMS.

A process for the production of an upgraded hydrocarbon product such as herein described, from a hydrocarbon feedstock such as herein described, in the presence of a catalyst such as herein described, said method comprising the steps of :

(a) providing a catalytic emulsion comprising a water in oil emulsion containing a first alkali metal such as herein described, and a second metal selected from the group consisting of Group VIII non-noble metals, alkaline earth metals and mixtures thereof such as herein described ;

(b) mixing the catalytic emulsion with a hydrocarbon feedstock such as herein described to provide a reaction mixture ; and

(c) subjecting the reaction mixture to steam conversion so as to provide an upgraded hydrocarbon product.



*Complete Specification : 40 pages.* *Drawing : 3 sheets*

Kind of Application :- COMPLETE

Application for Patent Number 83/del/1996 filed on 12/01/1996

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office , New Delhi Branch - 110 008.

( Claims- 08 )

A time diversity communications apparatus, comprising: - a messaging terminal where messages are received from a caller; - a queue at the messaging terminal for queuing incoming messages; characterized in that - an encoder for encoding a first fragment of the message and remaining fragments of the message; - a transmitter for repeatedly transmitting the first fragment in a plurality of time slots to at least one of a plurality of selective call receivers operating in a first mode, the number of time slots equaling a desired number of repeat transmissions and wherein the first fragment contains instructions for decoding the remaining fragments in a second mode by at least one of the plurality of selective call receivers, and the transmitter for repeatedly transmitting remaining portions of the message in subsequent time slots; and - at least one of a plurality of selective call receivers that decodes the first fragment and the remaining portions of the message in accordance with instructions in the first fragment, and the selective call receiver decodes the first fragment repeatedly in the desired number of repeat transmissions.

## 4 CLAIMS

A head (200) for a plasma arc cutting torch comprising :

a cone ended peripheral nozzle (212), consisting of a cylindrical body with a cone end (214) extending from the body, defining a nozzle orifice (218) and nozzle throat (220);

an electrode (216) removably fitted axially within the nozzle having an operative front end (230) defining an end surface bearing an emissive insert (250);

a plasma formation zone (228) or plenum formed between the end surface of the electrode and the nozzle orifice;

a swirl (222) located between the nozzle and the electrode, through which plasma fuel gas is introduced into the nozzle, characterized in that a provision is made for introducing directly plasma fuel gas into the plasma formation zone or plenum beyond the junction (238) between the nozzle body and cone end thereby avoiding change in direction within the conical end of the nozzle before the plasma formation zone.

## 21 CLAIMS

A rotary mechanism comprising:

at least one pair of rotors (2a, 2b) mounted on spaced, parallel axes of rotation (8) and rotatable on said axes (8) in opposite directions to each other,

each rotor having a plurality of radially projecting arms (4),

radially outer faces on said arms (4) of each rotor directed away from the axis of rotation of said rotor,

the radially outer faces of said pair of rotors being brought together-in juxtaposition by said rotation of the rotors,

at least one of sealing means (20) and cutting (42,44) means at said raidally outer faces for engaging web material between the juxtaposed outer faces to seal and/or cut said web material,

and bearer means(24) on opposite end regions of said outer faces for contact with each other when said outer faces come together,

the cutting and/or sealing means(42,44,20) being disposed between the bearer means (24) on each face whereby said contact of the bearer means(24) sets a spacing between the cutting and/or sealing means(42,44,20) on the respective faces,

characterized in that at one end region of the juxtaposed outer faces, the bearer means (42) comprise locating elements (28,30) positioning the faces in the direction of the axes of rotation of the pair of rotors, and

at the opposite end region of said faces the bearer means (24) comprise bearing elements (32) permitting relative movement in said axial direction.

## 20CLAIMS

A detergent bleaching composition comprising:

a peroxy bleaching compound;
a surface-active material; and
a compound of the general formula (A):

$$[\{M'_aL\}_bX_c]^zY_q \qquad (A)$$

in which

M' represents hydrogen or a metal selected from Ti, V, Co, Zn, Mg, Ca, Sr, Ba, Na, K, and Li;

X represents a coordinating species;

a represents zero or an integer in the range from 0 to 5;

b represents an integer in the range from 1 to 4;

c represents zero or an integer in the range from 0 to 4;

z represents the charge of the compound and is an integer which can be positive, zero or negative;

Y represents a counter ion, the type of which is dependent on the charge of the compound;

q = z/[charge Y];

L represents a pentadentate ligand of general formula (B):

$$R^1R^1N\text{-}W\text{-}NR^1R^2 \qquad (B)$$

Wherein

Each $R^1$ independently represents $-R^3$-V, in which $R^3$ represents optionally substituted alkylene, alkenylene, oxyalkylene, aminoalkylene or alkylene ether, and V represents an optionally substituted heteroaryl group selected from pyridinyl, pyrazinyl, pyrazolyl, imidazolyl, benzimidazolyl, pyrimidinyl, triazolyl thiazolyl;

W represents an optionally substituted alkylene bridging group selected from

$-CH_2CH_2-$, $-CH_2CH_2CH_2-$, $-CH_2CH_2CH_2CH_2-$, and $-CH_2-C_6H_4-CH_2-$;

$R^2$ represents a group selected from alkyl and aryl, optionally substituted with a substituents selected from hydroxy, alkoxy, carboxylate, carboxamide, carboxylic ester, sulphonate, amine, alkylamine or $N^+(R^4)_3$, wherein $R^4$ is selected from hydrogen, alkanyl, alkenyl, arylalkanyl, arylalkenyl, oxyalkanyl, aminoalkanyl, aminoalkenyl, alkenyl ether and alkenyl ether.

## 18 CLAIM

1.A flame- retardant thermoplastic moulding composition containing

A. 5 to 95 parts by weight of an aromatic polycarbonate or polyestercarbonate

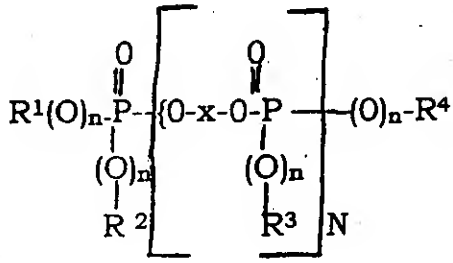
B. 0.5 to 60 pats by weight of at least one graft polymer of

B.1 95 to 5 wt.% of one or more viny1 monomers on

B.2 95 to 5 wt.% of one or more graft substrateswith a glass transition temperature <100C

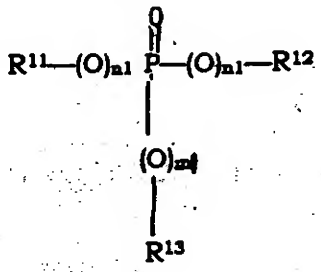
C. 0 to 45 parts by weight of a thermoplastic viny1 comphoruer,

D. 0.5 to 20 parts by weight of at least one phosphorous compound of general formula (I)



Wherein

$R^1$, $R^2$, $R^3$ and $R^4$, independently of each other, each represent $C_1$ to $C_8$ - alkyl, $C^5$ to $C_6$ cycloalkyl, $C_6$- to $C_{20}$-aryl or $C_7$ to $C_{12}$- aralkyl, which are optionally halogenated,,
n represents 0 or 1, which are independent of each other,
N is an average number 5 to 30,
X represents a mono – or polynuclear aromatic radical containing 6 to 30 carbon atoms,
E 0 to 5 parts by weight of a fluorinated polyolefin, and
F. 1 0.5 to 40 parts by weight of a very finely divided inorganic powder with an average particle diameter of less than or equal to 200 nm, and/or
F.2 0.5 to 20 parts by weight of a monophosphorus compound of formula (1A)



(IA)

Wherein

$R^{11}$, $R^{12}$ and $R^{13}$, independently of each other, denote $C_1$ to $C_8$ - alkyl, which is optionally halogenated, or $C_6$- to $C_{20}$-aryl, which is optionally halogenated,
ml denotes 0 or 1, and
nl denotes 0 or 1,
wherein the sum of all the parts by weight of all the components is 100.

INDIAN APPLICATION NO. : 881/BOM/1998 DATED 01/12/1999

**APPROPRIATE OFFICE FOR OPPOSITION PROCEEDINGS (RULE 4, PATENTS RULES, 2003), PATENT OFFICE, MUMBAI - 13.**

## 16 CLAIM

A laser joining method of joining different workpieces made of plastic, or joining plastic to other materials, which comprises: making a top workpiece of a material that is transparent to the laser beam facing a laser source with a laser beam; making a second workpiece of a material that is absorbent for the laser beam so that the adjacent contact surfaces of the two workpieces being to melt and are bonded together in the subsequent cooling under pressure; including the step of arranging a mask of a material that is impermeable for the laser beam adjacent to the workpieces between the laser source and the workpieces to be joined for bonding the workpieces in a joining area of the contact surface; wherein the structure of said mask is larger than the wavelength of the laser beam used, and the laser source is directed at the contact surfaces to provide an essentially vertical laser beam curtain at essentially a right angle through the mask in such a way that a laser line joining area is formed on said contact surfaces, heating and joining the workpieces by moving the laser beam and the workpieces relative to each other to move the laser line and to provide an extended joining area, wherein the laser beam is arranged at a right angle above the joining area of the contact surfaces, and wherein a liner laser beam is created by at least one semiconductor laser.

**13 CLAIMS**

The invention relates to a spray head (100) for a fluid dispenser for dispensing a fluid, the spray head being provided with an expulsion channel (1) opening out in a spray orifice (9), and with a moving closure member (10) mounted to move between a closed position ,in which it closes said orifice (9), and a spray position ,said closure member (10) being urged resiliently towards its closed position by the pressure of the fluid, the spray head being provided with a swirl chamber (20) of variable volume, the volume of said swirl chamber (20) being at its maximum when the closure member (10) is in the spray position, and being substantially zero when said closure member is in the closed position, said spray head being characterized in that said closure member (10) is provided with the spray orifice (9) and with swirl channels (30) which, when the closure member is in the spray position ,connect said expulsion channel (1) to said swirl chamber (20), the volume and the geometrical configuration of said channels (30) remaining unchanged whatever the position of the closure member (10).

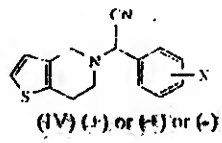
09 CLAIMS

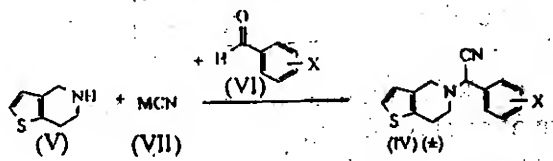
A process for the preparation of a compound of formula (IV) for use as an intermediate in the preparation of thieno [3, 2-c] pyridine derivatives (clopidogrel)



(IV) (+) or (±) or (-)

Where x represents either hydrogen, flouro, chloro, bromo or iodo atom, preferably 2-chloro, which comprises :

(i) reacting as compound of formula (V) or its salt



(V) (VII) (VI) (IV) (±)

With a cyanide of general formula (VII) where M represents alkali metal, TMS, Cu, or hydrogen, and followed by addition of compound of general formula (VI), where X is as defined earlier, to obtain said racemic compound of general formula (IV), said compounds of formulae (VII), (VI) and (V) being reacted in any order, and

(ii) if desired, resolving the compound of formula (IV) or its salt so obtained, to its (+) and (-) form or its salt.

## 3 CLAIMS

A method of operating a roller bar screen , characterized in that constructional measures substantially in the form of equipping the rollers with variable speed drives are implemented in a preparatory step, and selected control and limit values are generated based on the average properties of the bulk material to be expected, by means of a process control and regulation system, whereby the optimal number of revolutions is present for each individual roller depending on the process; and that the dynamics of said roller grate screen is influenced by a control procedure having the following features;

Detection of the bulk material quantity by multi-point measurement of the filling level in the zone of the screen train, as well as of the actual motor outputs by measuring the motor current consumption, as minimum information in addition to other optional information, by means of sensors, forwarding of said information to control-internal processing and evaluation units;

With specially developed modeling of the screen filling contours as well as derivation of the control values for adapting the numbers of revolutions of the rollers;

Superimposing of the determined rotational speed values with period or non periodic functions, with calculations of the nominal rotational speed values based thereon;

Outputting of the said nominal rotational speed values to the roller drives; and controlling the number of revolutions of the rollers with inclusion of the actual rotational speed values.

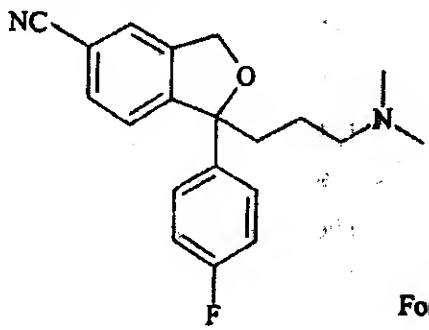
Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

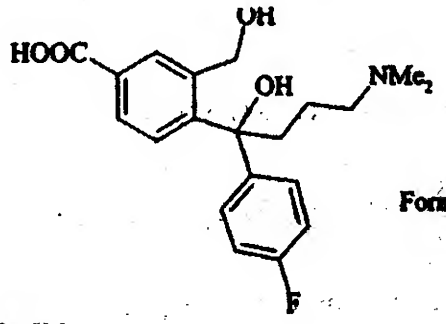
## 9 Claims

A process for the preparation of citalopram of formula I



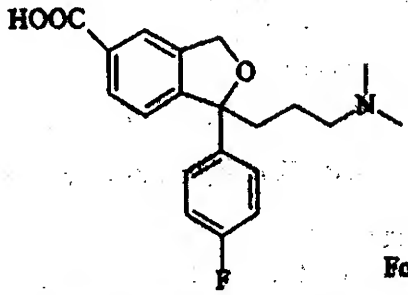
**Formula I**

comprising reacting 5-carboxyphthalide successively with a Grignard reagent of 4-halo-fluorophenyl and a Grignard reagent of 3-halo-N,N-dimethyl-propylamine and then effecting, in a known manner, ring closure of the resulting compound of Formula XI



Formula XI

to a compound of Formula IV



Formula IV

followed by conversion of the compound of Formula IV into citalopram in a known manner.

AN IMPROVED PROCESS FOR THE PREPARATION OF CITALOPRAM

Applicant: NATCO PHARMA LTD
a company registered under the Indian Company's Act 1956,having its registered office at NATCO House
ROAD NO.2,BANJARA HILLS,
HYDERABAD 500 033, ANDRA PRADESH, INDIA

Inventors: 1. PULLA REDDY MUDDASANI
2. VENKAIAH CHOWDARY NANNAPANENI

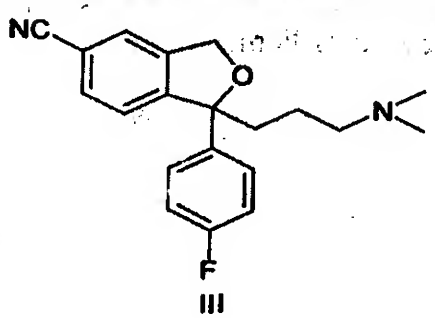
Application No157/MAS/2001 filed on 22nd FEB 2001

Complete specification Left22nd NOV 2001

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 1972), Patent Office, Chennai Branch.

13 Claims

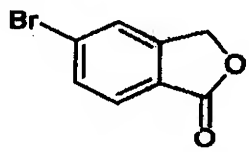
1. An improved process for the preparation of citalopram of formula-III,



III

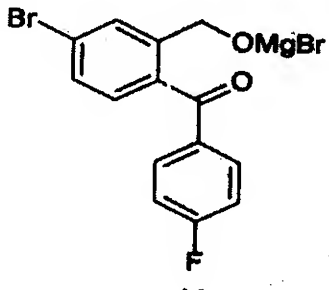
which comprises:

(i) A Grignard reaction on 5-bromophthalide of formula-IV, .



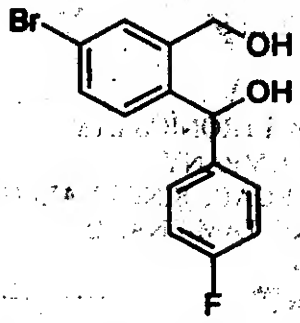
IV

with 4-fluorophenylmagnesium bromide at -25°C to +10°C in THF medium to get the benzophenone derivative of formula-V,



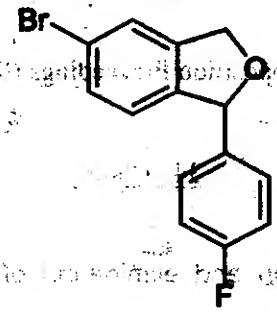
V

(ii) Reducing the benzopnenone derivative of formula-V with sodium monohydride in the presence of an alcoholic solvent at -25°C to +10°C to get the dihydroxy compound of formula-VIII



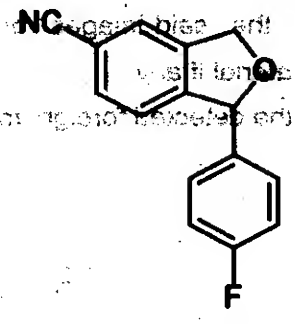
VIII

(iii) Reacting the compound of the formula-VIII obtained in step (ii) with an acid catalyst in a non-polar solvent to obtain a compound of the formula-I



I

(iv) Reacting the compound of the formula-I obtained in step (iii) with cuprous cyanide in dimethylformamide solvent medium and isolating the resulting cyano compound by crystallization technique using polar and or alcoholic solvents to obtain the compound of the formula-II,



II

(vi) Reacting the compound of formula II with a strong base in the presence of dipolar aprotic solvent and adding 3-dimethylaminopropyl chloride to obtain the compound of formula III after recrystallization from a suitable organic solvent

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

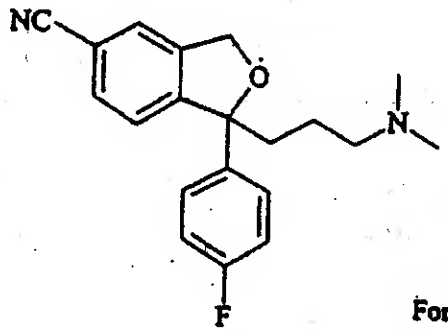
5 Claims

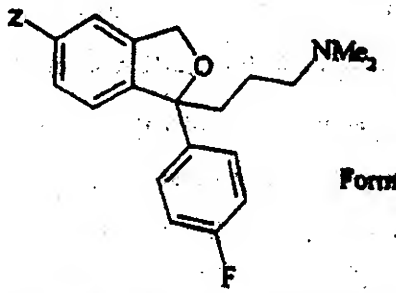
1. A method for the preparation of citalopram of Formula I



Formula I

the said method comprising the steps of :

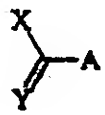
(i) reacting a compound of Formula VIII



Formula VIII

wherein Z is halogen, with Mg or an organolithium compound, e.g. n-BuLi, or with an organometallic complex composed of Mg and/or Mn and/or Li and alkyl or aryl groups to achieve a first intermediate;

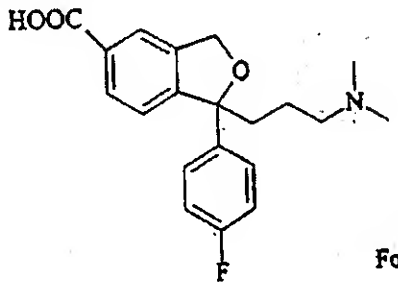
(ii) reacting said first intermediate with $CO_2$, $CS_2$ or a compound of Formula IX



Formula IX

wherein A and X are independently selected from halide, CN, $OR^5$ or $SR^6$ wherein $R^5$ and $R^6$ are independently selected from $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl and each of these $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl groups are unsubstituted or substituted with halogen, $C_{1-4}$ alkyl, cyano, hydroxy, $C_{1-4}$ alkoxy, trifluoromethyl, nitro, amino, $C_{1-4}$ alkylamino or di-$C_{1-4}$alkylamino, $NR^7R^8$ where $R^7$ and $R^8$ are independently selected from hydrogen, $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl and each of these $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl groups are unsubstituted or substituted with halogen, $C_{1-4}$ alkyl, cyano, hydroxy, $C_{1-4}$ alkoxy, trifluoromethyl, nitro, amino, $C_{1-4}$ alkylamino or di-$C_{1-4}$ alkylamino; Y is O, S, or $NR^9$ where $R^9$ is selected from hydrogen, $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl and each of these $C_{1-6}$ alkyl, aryl, heteroaryl or benzyl groups are unsubstituted or substituted with halogen, $C_{1-4}$ alkyl, cyano, hydroxy, $C_{1-4}$ alkoxy, trifluromethyl, nitro, amino, $C_{1-4}$ alkylamino or di-$C_{1-4}$ alkylamino; to achieve a second intermediate;

(iii) reacting said second intermediate with water, a hydroxide such as NaOH, or an aqueous solution of an acid to obtain a compound of formula IV; and



Formula IV

(iv) reacting the compound of Formula IV with a dehydrating agent, such as herein described, and a sulfonamide of the Formula $H_2H$-$SO_2$-R wherein R is:

(d) an optionally substituted $NH_2$, or $C_{1-6}$ alkyloxy,

(e) aryloxy or heteroaryloxy optionally substituted with halogen, $C_{1-4}$-alkyl, cyano hydroxy, $C_{1-4}$-alkoxy, trifluoromethyl, nitro, amino, $C_{1-4}$-alkylamino or di-$C_{1-4}$-alkylamino, or

(f) aryl or heteroaryl optionally substituted with halogen $C_{1-4}$-alkyl, cyano, hydroxy, $C_{1-4}$-alkoxy, trifluoromethyl, nitro, amino, $C_{1-4}$-alkylamino or di-$C_{1-4}$-alkylamino;

to obtain citalopram of Formula I as the base or a pharmaceutically acceptable salt thereof.

A METHOD OF MANUFACTURING A LIGHT-WIEGHT CALCIUM SILICATE BOARD

Applicant: ASK CORPORATION
OF 5-5, TSURUMI-CHUO
2-CHOME, TSURUMI-KU,YOKOHAMA-SHI,
KANAGAWA 230 (A JAPANESE COMPANY)
JAPAN

Inventors: 1. Seishiro Suzuki
2. Masato Sakiyama
3. Takuya ASAMI
7. Toru Sugiyama 4. Tomoki IWANAGA
8. Masaaki ODA 5. Yasuhide OSHIO
6. Shigemitsu SHIROMOTO

Application No:1186/MAS/96 filed on 5th JUL 96

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

2 Claims

1. A method of manufacturing a light-weight calcium silicate board comprising; a step of forming a material slurry into a prescribed shape, said material slurry comprising, as a solid component, 17 to 50wt% of caleareous material, 15 to 45wt% of silica containing material, 2 to 8 wt% of fiber material and 5 to 40wt% of inorganic fillers; and a step of hydrothermally reacting the obtained molded body in a pressure container, wherein 2 to 20wt% of at least one kind of amorphous silica containing material and silicate material, each having a specific surface area of 1 $m^2/g$ or more, is used as a portion of said silica containing material; and, before said hydrothermal reaction, said molded body is subjected to primary curing under conditions where (curing temperature – 15) x curing time $\geq$ 120°C·hr.

" A DEVICE FOR AUTOMATICALLY FEEDING CASHEW NUTS TO SHELLING MACHINES"

Applicant: OLTREMARE S.p.A.,
AN ITALIAN JOINT STOCK COMPANY
VIA PIEMONTE 5 - I - 40069
ZOLA PREDOSA, PROVINCE OF BOLOGNA
ITALY

Inventors: 1. AMEDEO ROCCETTI

Application No:870/MAS/1996 filed on 23/05/1996

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

9 Claims

1. A device for automatically feeding cashew nuts to shelling machines of known type that has a battery of spring jaws (31) that are open both below and above and are mounted next to each other on a horizontal slideway (32) which at the correct moment moves said jaws from a loading position, in which they are placed against the means for feeding the nuts, standing on their edge, with their longitudinal axis horizontal and with their convex part uppermost, to a position in which the nuts are inserted between respective pairs of upper and lower shelling blades (43, 44), which device is characterized in that it comprises:

- a container (1) with means (2) that feed it with the sized loose nuts (N) up to a predetermined and approximately constant level, means being provided for taking, from this container, streams of nuts, one nut after the other, and for discharging the nuts into the ends of respective orientating channels (18);

- a battery of horizontal orientating channels (18) arranged side by side and parallel with each other, against one of the ends of which said battery of spring jaws is placed, these channels having a cross-section with an approximately V profile such that each nut fed in periodically by upstream means stands on its edge in the channel with its longitudinal axis horizontal and with its convex part either uppermost or downmost; at

least one stop down (120) being provided at an intermediate point of each channel, and each channel having at least one pusher (29), which at the correct moment comes up against the rear of the nut fed in by said means at the starting end of each channel and pushes the nut longitudinally along the channel to the other end, in such a way that, if the nut is orientated with its convex part uppermost, it goes over said stop down without modifying its orientation, whereas if the nut is orientated with its convex part downmost, when it comes to the stop it rises up at the rear in such a way that the pusher rolls it transversely around its forward lobe until its convex part is uppermost; and

- means (35) for exactly inserting the orientated nuts that have reached the rear end of the respective orientating channel, into the open spring-loaded jaws (31), which then transfer the nuts in a known manner to the shelling station.

" AN IMPROVED PROCESS FOR THE PREPARATION OF CEFPROZIL"

Applicant: ORCHID CHEMICALS & PHARMACEUTICALS LTD.
AN INDIAN COMPANY
ORCHID TOWERES, 313, VALLUVAR KOTTAM
HIGH ROAD, NUNGAMBAKKAM, CHENNAI-600034
INDIA

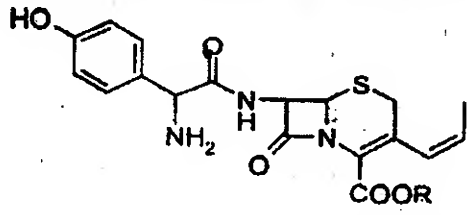
Inventors: 1. PANDURANG BALWANT DESHPANDE
2. BHAUSAHEB PANDHARINATH KHANDANGALE
3. KUMAR GURUSAMY
4. RAMESH ATHMARAM KONDA

Application No:800/MAS/2002 filed on 30/10/2002

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

15 Claims

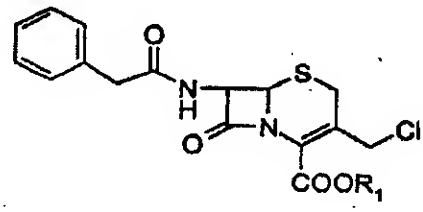
1. A process for the preparation of 7-[2-amino-2-phenylacetamido]-3-cephem-4-carboxylic acid derivatives of the formula (I)



(I)

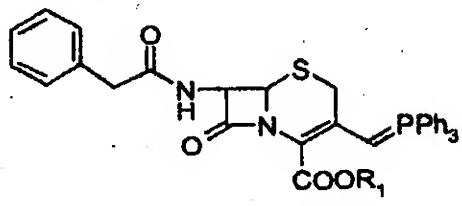
wherein R represents hydrogen, ester which form a prodrug or a counter ion which forms a salt, comprising the steps of :

i) converting the compound of formula (VII)



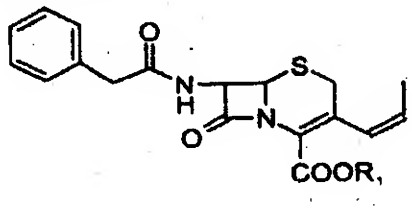
(VII)

wherein $R_1$ represents carboxy protecting group to a compound of the formula (VIII) using Wittig reagent in the presence of solvent and alkali iodide,



(VIII)

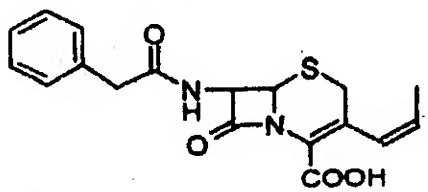
ii) reacting the compound of formula (VIII) with acetaldehyde using lithium chloride in the presence of solvent at a temperature in the range of –10 °C to 30 °C to produce a compound of formula (IX)



(IX)

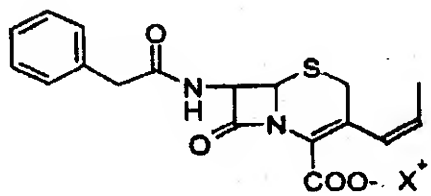
wherein $R_1$ is as defined above,

iii) deesterifying the carboxy protecting group of compound of the formula (IX) using an acid in the presence of solvent at a temperature in the range of 10 °C to 50 °C to yield compound of formula (X),



(X)

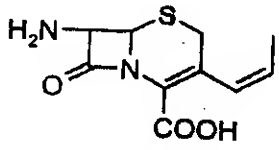
iv) converting the compound of formula (X) to compound of formula (XI)



(XI)

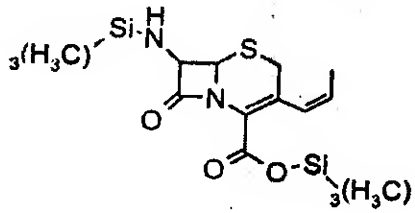
wherein X represents a counter ion which forms a salt in the presence of a base and solvent,

v) neutralizing the compound of formula (XI) followed by enzymatic hydrolysis to produce APCA of formula (V),



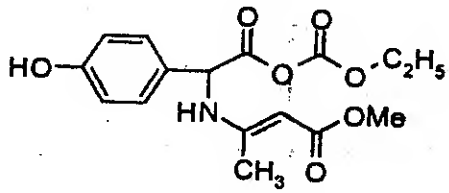
(V).

vi) silylating the APCA of formula (V) using a mixture of trimethyl silylchloride and hexamethyl disilazane in the presence of a halogenated solvent to produce silylated APCA of formula (XII),



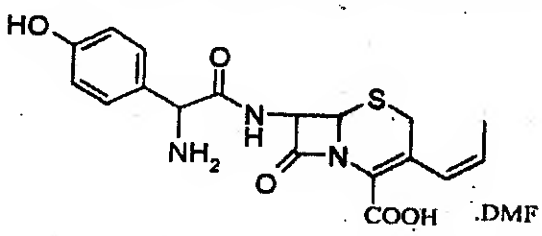
(XII)

vii) condensing the silylated derivative of APCA of the formula (XII) with the mixed anhydride of the formula (XIII)



(XIII)

in the presence of a solvent and a base at a temperature in the range of –50 °C to 10 °C to produce DMF solvate of compound of formula (XIV),



(IV)

viii) hydrolyzing the DMF solvate of compound of formula (XIV) in the presence of solvent to the compound of formula (I).

Inventors: 1. SANTHANAM RAMARETHINAM

Application No958/MAS/2001 filed on 26/11/2001

Complete specification Left: 20/05/2002

Appropriate office for Opposition Proceedings (Rule 4, Patents Rules, 2003), Patent Office, Chennai Branch.

16 Claims

1. A process for entomopathogenic formulation for use as root feed to control the coconut eriophyid mite containing exudates from mixture of bacteria and fungi through a process of fermentation which comprises the following steps:

a. selecting a mixture thereof from a group comprising different strains of bacillus species and different orders of fungal organisms, the said mixture consisting of *Streptomyces avermitilis (B1), Bacillus megaterium (B2), Pseudomonas florescence (B3), Bacillus polymixa (B4), Bacillus subtilis (B5), Verticillium lecanii (E1), Metarhizium anisopliae (E2), Paecilomyces fumosoresus (E3), Beauveria bassiana (E4)* and *Hirsutella thompsonii (E5)*;

b. preparing plurality of culture mediums (C1-C10) each of the culture medium containing known basic common nutrients carrying salts dissolved in

sterile water and further including special specific nutrient composition for each selection to achieve the plurality of specific culture medium for each bacteria/fungal organism;

c. culturing of each selected bacteria and/or fungal organism ie *Streptomyces avermitilis (B1), Bacillus megaterium (B2), Pseudomonas florescence (B3), Bacillus polymixa (B4), Bacillus subtilis (B5), Verticillium lecanii (E1), Metarhizium anisopliae (E2), Paecilomyces fumosoreus (E3), Beauveria bassiana (E4)* and *Hirsutella thompsonii (E5)*) separately and respectively in prepared culture medium/s (C1-C10) so as to achieve $10^{10}$ bacterial count or $10^{8}$ CFU's fungal count in each culture;

d. heating the cultured organism/s at 120°C with 20lbs pressure so as to kill organism and to obtain cultured filtrate (CF) which includes exudates and living bacteria;

e. preparing carrier medium (Ca2);

f. adding and homogenizing the cultured filtrate (CF) to carrier medium (Ca2) so prepared to achieve a entomopathogenic formulation (F).

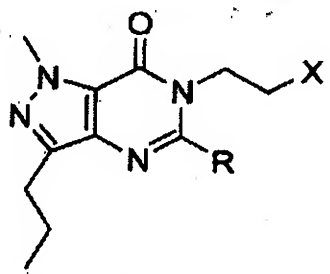
10 Claims

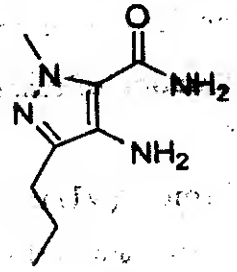
1. A process for the preparation of 1-methyl-3-propyl-6,7-dihydro-*1H*-pyrazolo[4,3-d]pyrimidin-7-one derivatives of the formula (I)



(I)

wherein X represents a leaving group such as halogen atom, methane sulphonate, *p*-toluene sulphonate and the like; R represents methyl or ethyl, which comprises :

i). reacting a compound of formula (III)

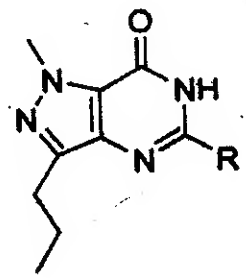


(III)

with a compound of formula (IV),

(IV)

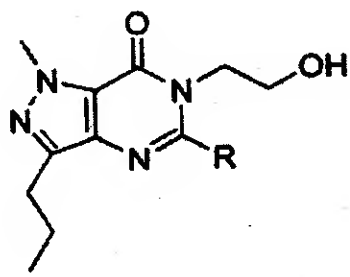
where R represents methyl or ethyl group, Z is halide or $OCOR^1$ where $R^1$ represents ($C_1$-$C_6$)alkyl group, in the presence of an organic base and an acid such as acetic or propionic acid and a solvent, to give a compound of formula (V)



(V)

where R is as defined above, at a temperature in the range of -20 °C to 250 °C, preferably at 0 °C to 200 °C and the duration of reaction ranges from 2 h to 120 h, preferably from 2 to 72 h.

ii). N-alkylating the compound of formula (V) to a compound of formula (VI)



(VI)

where all symbols are as defined above using an alkylating agent in the presence of a base and solvent, at a temperature in the range of 0 °C to 120 °C, preferably at 0 °C to 80 °C and the duration of reaction ranges from 2 h to 96 h, preferably from 2 to 48 h.

iii). converting the compound of formula (VI) to a compound of formula (I) using a reagent in the presence of a base and solvent, at a temperature in the range of -20 °C to 80 °C, preferably at 0 °C to 25 °C and the duration of reaction ranges from 30 min. to 48 h, preferably from 30 min. to 20 h and

iv). isolating the compound of formula (I) by using conventional methods.

Title : A METHOD AND APPARATUS FOR THE PRODUCTION OF HONEYCOMB FOR BEEKEEPING

Applicant : BREAT, S.L. OF IND. 17, 08930 SANT ADRIA DE BESOS, BARCELONA, SPAIN

Inventor : D. CARLOS FERRER VIDAL

Application no 1130/CAL/1998 FILED ON 26.6.1998
(CONVENTION NO. 970 1564 AND 980 1156 FILED ON 15.7.1997 AND 04.06.1998 IN SPAIN.)
*APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.*

## 16CLAIMS.

A method for the production of a honeycomb for beekeeping, said method comprising the steps of:
applying molten wax to a resilient mould constituted by a plurality of cores, for forming cells of half honeycombs, directly mounted and protruding from a first endless belt;
filling with molten wax the spaces between the adjacent cores separated at their point of attachment to the first endless belt so as to form a thin plate interconnecting the spaces between the cells by a second endless belt moving parallel to the first endless belt with a separation between said belts being slightly greater than the thickness of the half honeycomb to be produced, the second endless belt moving in the same direction and with the same speed as that of the first endless belt to form a moulded half honeycomb;
cooling the moulded half honeycomb, so produced;
separating the moulded half honeycomb from the core carrying mould; and
joining two moulded half honeycombs by their bases back to back, having cells extending in opposite direction to form a honeycomb.

*APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.*

**12CLAIMS.**

A preassembled fluidizing device having expansive air passage stimulating enhanced flow of granular materials in tank trailers and containers; said fluidizing device comprising a hopper and an aeration device wherein the aeration device having an inner part and an outer part, the hopper having a wall with a hole therein, the inner part of said aeration device comprising a generally conical aeration gasket being sized to fit over said hopper wall hole and having a head, a fastening rod extending from said head through the interior of said conical aeration gasket, a mounting clip connected to said fastening rod and adapted to interact with said hopper wall hole to premount the inner part of the aeration device to an inner surface of said hopper wall before the outer part of said aeration device is connected to said fastening rod, said fastening rod extending through said hopper wall hole externally of said hopper; said outer part of the aeration device including an air distributor subsequently mounted to said fastening rod externally of said hopper wall, said air distributor being adapted to be operatively connected to a source of pressurized air, and the upper end of said air

distributor having an opening which is in communication with said hopper wall hole and said aeration gasket to supply substantial pressurized air to the aeration device during its application.

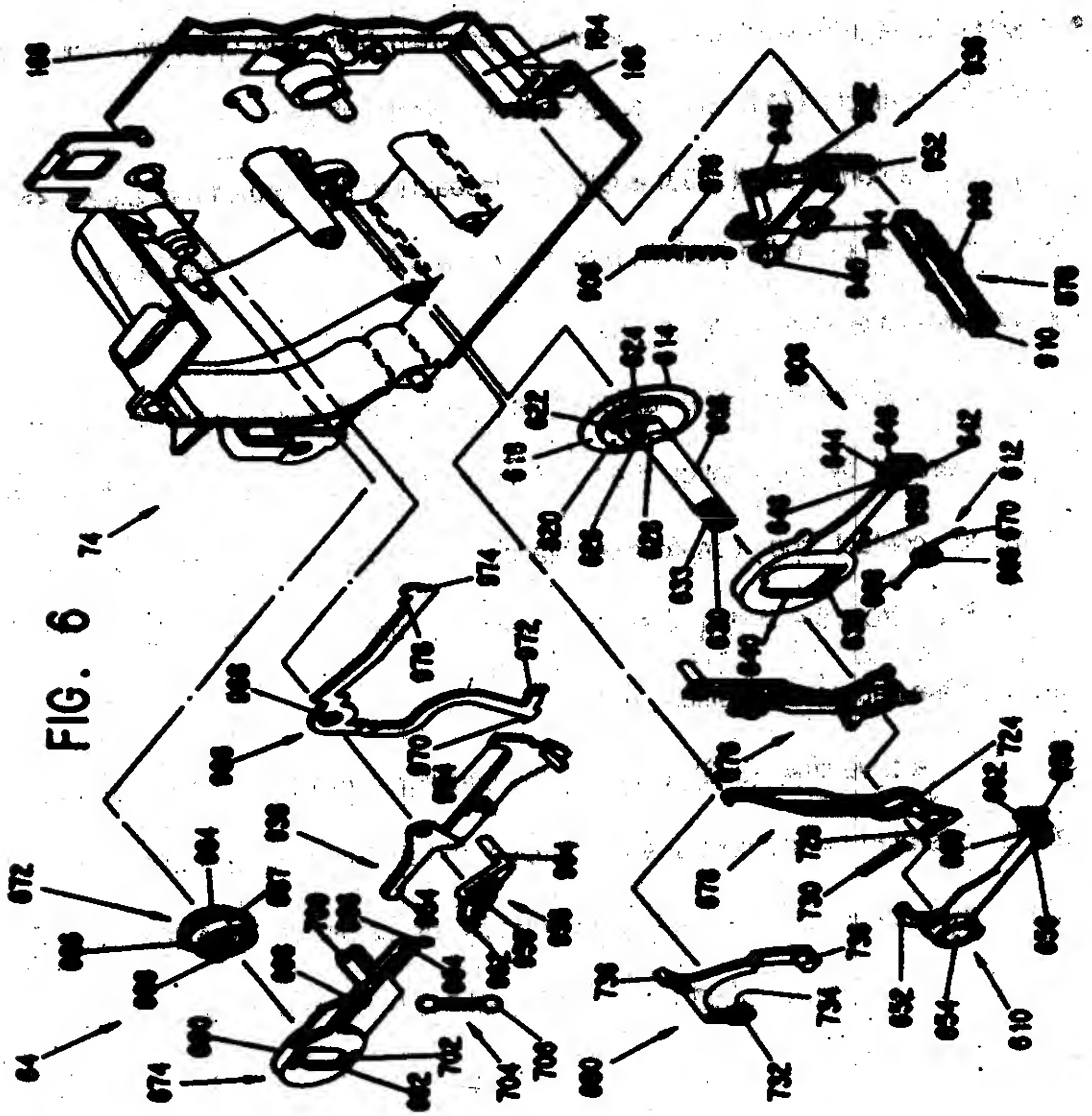

FIG. 6

1. A quiet cycle selector for a cam-operated timer, comprising

a housing ;

a camstack (62) carried in the housing for rotation and having switch program blades corresponding to predetermined appliance functions and a drive surface ;

a camstack drive (64) carried in the housing and operated by a motor to engage the camstack drive surface to rotate the camstack (62) ;

blade switches (66) placed in working relationship to the camstack switch program blades, having switch blades (66) provided with electrical contacts (744), cam-follower blades (790), cam-follower electrical contacts, and cam-follower riders (802) engaging the switch program blades to open and close the electrical contacts (744) with the cam-follower electrical contacts ;

a control shaft (438) axially displaceable in the housing to a depressed position and an extended position providing an axis for rotation of the camstack (62) with a ramped end and a control end ;

a switch lifter (874) carried in the housing and having a switch lifter ramp (900) operated by the control shaft (438) ramped end and a switch lifter contacter (904) to contact the cam-follower blades (790) to disengage the cam-follower riders (802) from the switch program blades when the control shaft (438) is moved to the depressed position ; and .

a drive lifter (936) carried in the housing and having a drive lifter ramp that is operated by the control shaft ramped end and a drive contacter (936) to contact the camstack drive (64) to disengage the camstack drive (64) from the camstack drive surface when the control shaft (438) is moved to the depressed position.

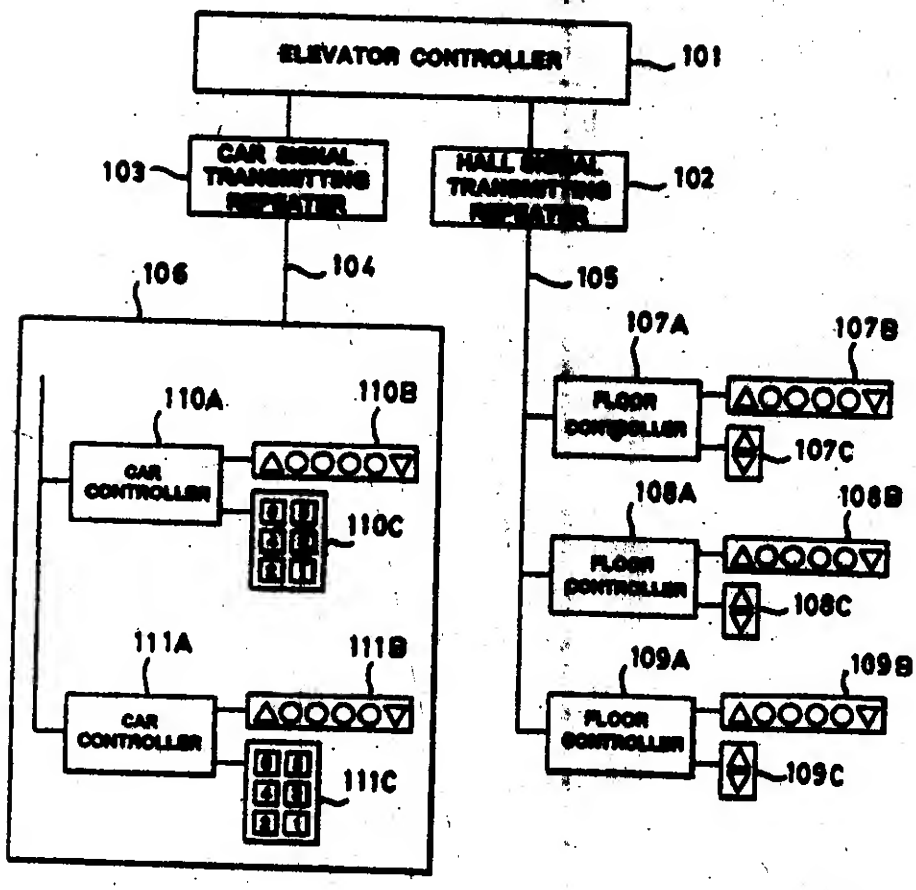
**33 CLAIMS.**

**FIG. 4**



An elevator control system for controlling an elevator car which travels along a plurality of floors in a building, the elevator control system comprising:

a plurality of car position indicators installed at each floor for displaying a current floor position information of the car;

a plurality of hall call buttons installed at each floor for enabling a user to call the car and having lamps therein for displaying a call when the call is registered;

a plurality of floor controllers each having

group information memory means for storing a group identifier representing a group to which the floor controllers belong,

floor controller identifier memory means for storing an identifier of the floor controller, and

first processor means for controlling input/output of a floor information signal by generating and outputting a hall call signal responding to a hall call button pushed by the user and by receiving and outputting a car position information signal to the indicators for displaying, the floor controllers being installed at each floor and connected to the indicators installed at the same floor via a transmission line;

an elevator controller having

group information memory means for storing the group identifiers stored in the floor controllers,

floor controller identifier memory means for storing the identifier for each floor controller,

timer means for outputting a timing signal for transmitting an information signal to the floor controllers in each predetermined period of time,

second processor means for outputting an individual information signal for corresponding floors including an indicator lamp lighting signal for displaying a response to a hall call signal as well as a common information signal for all floors including the car position information signal whenever the output from the timer means is generated,

group selecting signal generating means for generating a group information signal selected by the second processor means from among group information stored in the group information memory means of the elevator controller and providing the second processor means with the selected group information signal included in the individual information signal, and

means for generating and outputting a failure check command signal for checking a failure of the floor controllers ;

a hall signal transmitting repeater for sending the individual and common information signals received from the elevator controller and transmitting the information signal received from the floor controller; and

a serial transmission line connected to the plurality for floor controller commonly and providing a signal transmission line between the hall signal transmitting repeater and the piurality of floor controllers.

Title : HOT WATER SOLUBLE INSTANT TEA
Applicant : GOODRICKE GROUP LIMITED, OF "CAMELLIA HOUSE" 14, GURUSADAY ROAD, KOLKATA 700 0019, INDIA

Inventor : DEVARAYAN SIVANARUL BAVAN
Application no 1671/KOL-NP/2003 FILED ON 26.12.2003

*APPROPRIATE OFFICE FOR OPPOSITION PROCEEDING (RULE 4, PATENT RULES 2003) PATENT OFFICE KOLKATA.*

**10CLAIMS.**

A method for the production of hot water soluble instant tea, said method comprising the steps of:

(a) forming an extract by treating black tea leaves with hard warm water having hardness of 10 to 140 ppm and pH of 6.8 to 7.2 such as hereindescribed at a temperature in the range of 60 to 105°C ,

(b) stripping the extract of its aroma volatiles by passing the tea extract through a flash evaporator under partial vacuum, wherein the residence period is about 30 seconds to 360 seconds,

(c) separating at least about 12% by wt. as insoluble tea solids from the extract by subjecting the extract to repeated clarification and polishing to obtain a clarified concentrate,

(d) separating 6-10% soluble tea solids from the clarified concentrate,

(e) adjusting the pH of the concentrate to neutral by adding an edible acid,

(f) adding the aroma volatiles obtained in step (b) to the concentrate, and

(g) obtaining a substantially moisture free tea powder capable of being reconstituted in hot water to produce instant tea, substantially free of cloudiness and haze.

**39CLAIMS.**

A variable capacity gas compressor having a block with a plurality of cylinders formed therethrough, said cylinders having open discharge ends, a piston reciprocatably mounted in each said cylinder, a valve plate mounted on said block over the open ends of said cylinders and defining a plurality of compression chambers, said plate having a plurality of discharge valves adapted to place said compression chambers in communication with the high side of said compressor, a plurality of suction valves on said compressor adapted to place said compression chambers in communication with a low side of said compressor, a crankshaft rotatably mounted on said block and having a rotational axis and a plurality of crankpins formed thereon, a connecting rod for each said piston and mounted on a crankpin, at least one of said crankpins being complex and having an eccentric cam rotatably mounted on an inner shaft of said crankpin and serving as a journal for bearing means, at least one stop element on said crankshaft at one or more pre designed angular positions, at least one dog element on said cam at one or more pre designed angular positions, said stop elements and dog elements defining end points of rotatability of said cam on said crankpin shaft, a reversible motor on said compressor for driving said crankshaft selectively in either rotational direction in accordance with operational signals transmitted thereto, said cam being rotatable to one said

end point upon rotation of said crankshaft in one direction and to the other end point upon rotation of said crankshaft in the reverse direction, said stop elements and dog elements forming a junction at each said end point, and a stabilizing structure for at least one of said junctions and comprising at least one structure selected from the group consisting of :

(A) a positive lock structure selected from the group consisting of -

(a) a latching device having cooperating elements on said crankshaft and said cam, said elements being engageable and-disengageable at least at one of said end points by the application of or the release of, respectively, centrifugal force applied to one of said elements, or

(b) a pressure differential operable device having cooperating elements on said crankshaft and said cam, said elements being engageable and disengageable by sudden and opposite angular motion respectively between said crankpin shaft and said cam at least at one of said end points; and

(8) a friction drag device having cooperating elements on said cam and said crankpin shaft and being engageable to resist destabilizing forces tending to rotate said cam on said crankpin shaft and separate the junction at least at one of said end points.

**( 7 Claims )**

A process for the preparation of high energy, high protein snack food, having composition comprising following composition in weight percent:

| | |
|---|---|
| Refined wheat flour having at least 11 % protein | 18 - 22%, |
| Roasted groundnut grits | 18 - 22%, |
| Defatted soy flour | 6 - 10%, |
| Malted finger millet -dehulled | 6 - 10%, |
| Roasted sesame -dehulled | 1 - 3%, |
| Spices (chilli) | 0.2-0.7% |
| Sodium bicarbonate | 0.1-0.3% |
| Ammonium bicarbonate | 0.1-0.3% |
| Calcium carbonate | 0.15 -0.2% |
| Vitamin premix | 0.08 -0.12% |
| Unrefined sugar | 8 - 12% |
| Tomato puree | 15 - 25% |
| Soy lecithin | 02 – 0.5% and |
| Hydrogenated fat | 6-14 % |

the said process comprising steps of:

a) roasting of groundnut grits and seasame,

b) dehulling the roasted seasame,

c) malting the dehulled finger millet or pearl millet,

f) blending thoroughly ingredients of steps (a) to (c) along with wheat flour, defatted soy flour, salt species, vitamin premix, and sodium, potassium and ammonium salts as define above to get a dry powder blend,

e) dissolving unrefined sugar in tomato puree, decanting to remove the impurities to obtain a solution,

f) dissolving soy lecithin in hydrogenated fat to obtain a solution,

g) adding solutions of step (e) and (f) to dry powder of step(d) to obtain a non-sticky and smooth dough,

h) rolling into sheets, cutting or moulding the dough of step (g) to a desired shape and thickness,

i) taking the dough of step (h) in the temperature range of 180 to 220° C for 4-6 minutes,

j) cooling the baked product of step (i) by passing through a cooling conveyor belt to obtain the desired high energy high protein snack food,

| Kind of Application | : | COMPLETE |

Application for Patent Number **84/DEL/2002** filed on **31/01/2002.**

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office Delhi Branch, New Delhi – 110 008.

(11 Claims)

A process for the preparation of plant based-reconstituted collagen substratum which comprises;

i) preparing solubilized collagen by using purified proteolytic enzyme as herein described by using acid and alkali metal chloride as herein described, purifying further by known conventional method to get collagen solution,

ii) homogenizing the parenchymal layer of *Aloe vera* by conventional method to obtain mucilaginous extract,

iii) adding collagen solution as prepared in step (i) to *Aloe vera* extract as prepared in step (ii)

iv) reconstituting the solution mixture as prepared in step (iii) by adjusting the pH in the range of 7.2 – 7.4 using phosphate buffer and sodium hydroxide,

v) spreading/casting the reconstituted solution mixture prepared in step (iv), followed by drying at temperature not exceeding $33^0$C followed by sterilization, by known procedure, to get plant based-reconstituted collagen substratum.

| Kind of Application | : | Addition - Complete |

Application for Patent Number 166/Del/2002 filed on 28th Feb. 2002.
Patent of addition application of parent application no. 853/del/01 dt. 16.8.01 .
Antidated to 16.8.01

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office Branch, New Delhi – 110 008.

**( 8 Claims )**

A process for the preparation of chiral vicinal diols using the supported osmate catalyst of the formula $(S\text{-}NR_3)_2O_8O_{4-N}H_2O$ wherein S is a support ( resin or silica ) containing charge balancing anions as herein described , R is an alkyl group (methyl, ethyl, propyl, butyl ); n is the number of water molecules; the said, process comprises; asymmetrically dihydroxylating the olefin of the kind as herein described in the presence of a cinchona alkaloid such as herein described in a solvent systems consisting of water and atleast one of acetone, acetonitrile and t-butanol in a ratio of 1:1 to 1:3, at a temperature in the range of -70 to $100^0$C for a period of 0.5 to 24 hrs in the presence of catalytic amount of supported osmate catalyst wherein the supported osmate is 0.01 to 10 mole % of osmium content with respect to substrate, recovering the pure vicinal diol by conventional method as here described.

| Title | : | "A PROCESS FOR THE PREPARATION OF READY-TO SERVE PARTICULATE FREE TOMATO JUICE." |
| Applicant | : | COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH, Rafi Marg, New Delhi – 110 001, INDIA, an Indian body incorporated under the Registration of Societies Act (XXI of 1860). |
| Inventors | : | NGASEPPAM IBOYAIMA SINGH<br>BIAUNSUNDARAM SATHIYA MALA<br>VENKOBARAO MURALI MADHAV-all Indian. |
| Kind of Application | : | **Complete** |

Application for Patent Number 356/DEL/2002 filed on 27/03/2002.

Appropriate office for opposition proceedings (Rule 4, Patents Rules, 2003) Patent Office Branch, New Delhi – 110 005.

**( 04 Claims )**

1. A process for the preparation of ready-to-serve particulate free tomato juice comprising the steps of:
   a) crushing the washed fully ripe tomatoes in a conventional fruit mill,
   b) heating the above said crushed tomatoes at a temperature in range of 80-90$^0$C in a steam jacketed kettle,
   c) pulping the above heated crushed tomatoes to get pulpy juice by a conventional pulper,
   d) optionally micro filtering the above said tomato juice to obtain clarified tomato juice,
   e) adding additives such as sugar 10 to 25% by wt, acid such as citric acid 0 to 0.25% wt, salt, NaCl 0.05 to 1% wt, along with water 18to 75% by wt. to the above said clarified tomato juice to obtain the 50 to 100% clear tomato juice beverage,
   f) clarifying the above said beverage using a micro filtration unit at a pressure of 1-3 bar and at a temperature in the range of 25-30$^0$C,
   g) filling the above said clarified tomato juice beverage in a pre-sterile container, followed by pasteurization at a temperature in the range of 85-90$^0$C for a period ranging between 15 and 30 min.
